

Brandt Flash Dance

Features

- Special leaf penetrants
- Immediate greening effect
- Highly soluble form of Iron
- For use on all turfgrasses

Applied foliarly, BRANDT FLASH DANCE, with special leaf penetrants, will initiate an immediate greening effect triggered by the highly soluble glucoheptonate form of Iron.

General Recommendations

For use in a balanced fertility program for all turf grasses requiring trace elements.

Foliar Application

Use 3 ozs. of BRANDT FLASH DANCE per 1,000 sq. ft. of turf per application. At least two applications are recommended, especially if clippings are removed. Use a minimum of one gallon of water per 1,000 sq. ft. to ensure adequate coverage.

Use a minimum of 1 gallon water per 1,000 square feet with ground spray equipment. The use of an adjuvant may be desired to improve the properties of spray solution. Performing trials with adjuvants may be useful in determining the best inclusion rates for optimal performance. Optimum rate of application will vary depending on your soil properties such as soil pH, organic matter content and soil texture, weather conditions, time of year and general turf health and species. For best results, follow soil test or plant analysis recommendation.
